Emergency Status System Release and Registration

Tallahassee, FLA – Today, the Agency for Health Care Administration (Agency) announced the implementation of a newly developed emergency management database called Emergency Status System (ESS). Starting on August 19, the Agency informed Administrators and CEOs to register for ESS.

The Agency requires all licensees providing residential or inpatient services to use the approved database for reporting its emergency status, planning or operations as detailed by Section 408.821(4), Florida Statutes. ESS replaces both EMResource and FLHealthSTAT as the Agency approved database. The new system will allow providers to register and maintain their contact information as well as easily report the provider's emergency status, planning, or operations.
