CINQAIR® (reslizumab)

LENGTH OF AUTHORIZATION: Initial: SIX MONTHS Continuation: ONE YEAR

CLINICAL NOTES: Cinqair® is an interleukin-5 antagonist monoclonal antibody (IgG4 kappa) indicated for add-on maintenance treatment of patients with severe asthma aged 18 years and older, and with an eosinophilic phenotype.

REVIEW CRITERIA:

INITIAL REVIEW:

- Patient is 18 years of age or older.
- Prescribed or in consultation with an allergist, pulmonologist, or immunologist.
- Verified diagnosis of severe persistent asthma; must be an eosinophilic phenotype.
- Must have a blood eosinophil count of ≥ 150 cells/mcL within the past six weeks while on oral corticosteroid or ≥ 300 cells/mcL within the past year (submit documentation).
- Must have adherence to optimized medication therapy regimen, yet uncontrolled:
 - Hospitalization for asthma within the past year; OR
 - Two occurrences in the past year requiring systemic corticosteroids (oral or parenteral) to control exacerbations of asthma; OR
 - Daily use of corticosteroids with inability to taper off the medication.
- Trial of high dose inhaled corticosteroids and one of the following:
 - Inhaled long acting beta 2-agonist
 - theophylline
 - leukotriene receptor antagonist
- Trial of preferred monoclonal antibodies for the treatment of asthma (Dupixent®, Fasentra® and Xolair®).

CONTINUATION OF THERAPY:

- Patient has met initial review requirements.
- Improvement of asthma while on current regimen including Cinqair® through:
 - A reduction in the frequency or severity of symptoms or exacerbations; OR
 - A reduction in the daily maintenance oral corticosteroid dose; OR
 - A reduction in the number of rescued medications; OR
 - A reduction in the number of hospitalizations or emergency room visits.

DOSING:

The recommended dosage of Cinqair® is 3mg/kg administered intravenously once every 4 weeks over 20-50 minutes. It is administered by a healthcare provider.
